NORTHERN INDIA 5-18 January 2004

(Ranthambore – Bharatpur – Himalaya)

Fredrik Malmaeus & Mikael Malmaeus

micke.malmaeus@home.se vesslanveder@hotmail.com

Together with Ratan Singh

Fredrik was on a backpacker's trip to India and Nepal during fall 2001 and was rather well acquainted with the country and the birdwatching possibilities. Since we only had two weeks we did not want to spend time in India arranging transportation and accommodation so we preferred to organize most of the trip in advance. We learned about Mohit Aggarwal and Asian Adventures (AA) in other trip reports and decided to engage them to arrange the logistics. They were extremely helpful and flexible and we certainly recommend other birdwatchers to contact them before they go to India.

We arrived in India by KLM from Sweden via Amsterdam. The flight cost around €800. The total cost of the trip, including food and beer, was less than €1700 per person. During the trip we identified 315 bird species and had three sightings of tiger and six sightings of rock python. Ornithological highlights included black bittern, lammergeier, crested serpent eagle, mountain hawk eagle, pallas's fish-eagle, collared falconet, indian courser, sociable plover, painted snipe, indian skimmer, brown hawk-owl, three species of forktail, orange-headed ground thrush, scaly thrush, long-billed thrush, black-throated accentor, brown shrike, white-tailed rubythroat, wallcreeper and grey-necked bunting.

ASIAN ADVENTURES is a nature travel agency that offers a network of nature guides and accommodation possibilities all over India. They may arrange everything from single train

tickets to fully planned wildlife tours. Although they are specialized in wildlife experiences, they may also help organizing cultural side tracks, such as Taj Mahal. Their staff are very nice and they have good knowledge about birds and where to find them.

Our initial plan was to travel with Asian Adventures during the first half of the trip and to improvise after that, but we ended up travelling with drivers from AA the whole trip because of the convenience, good prices and nice company. You may find out more about Asian Adventures at http://www.indianwildlife.com/

ITINERARY:

January 5: Arrival in Delhi around 23:15. Met by AA representatives and taken to hotel.

January 6: Met with Mohit at Asian Adventures. Train delayed. Birdwatching in Okhla.

Train to Sawai Madhopur (Ranthambore) departure at 16:00, arrived at 22:00.

January 7: Ranthambore. (Two Safaris)

January 8: Ranthambore. (Soorwal Lake and One Safari)

January 9: Ranthambore. 13:00 train to Bharatpur. Arrive in Bharatpur at 16:00.

January 10: Bharatpur. January 11: Bharatpur.

January 12: Bharatpur in morning. Cultural afternoon in Fatehpur Sikri and Taj Mahal. Overnight train from Agra to Lal Kuan.

January 13: Transport to Pangot. Birdwatching in Pangot in the afternoon.

January 14: Sat Tal.

January 15: Bajún, Mongoli Valley, Corbett Falls.

January 16: Kosi River (between Mohan and Kumeria).

January 17: Transport to Delhi. Afternoon in Okhla. Shopping in Delhi.

January 18: Flight to Sweden (12 hours delayed).

ACCOMMODATION:

January 5 and January 17: Unknown hotel in Delhi, same block as Asian Adventures. Rs.

1000 (€18) per room per night.

January 6 to January 8: Hotel Vinayak (Ranthambore). Rs. 650 (€11) per room per night.

A bit cold in the night. Nice & clean.

January 9 to January 11: Hotel Sunbird (Bharatpur). Rs. 750 (€13) per room per night.

Warm, clean, good food & beer. Very close to Keoladeo park

entrance.

January 12: Overnight train. Rs 800 (€15) per person. Air condition.

January 13 & 14: Jungle Lore Birding Lodge (Pangot). Do not miss this place!

Extremely nice setting, food and staff, with good birding from the

veranda. Rs. 800 (€15) per room per night.

January 15 & 16: Tiger Camps (Corbett). Very nice and rather big. Good food.

Seemed rather luxurious but the price was similar to the other

places (exact price not documented).

All places seemed to be more or less connected to Asian Adventures, in particular Jungle Lore and Tiger Camps which apparently were owned by Asian Adventures (or the same people). Guiding and driving arrangements could be made at all the places, but especially in Jungle

Lore we felt that the staff were tightly connected to Mohit and were able to overview our itinerary for the rest of the trip.

FOOD:

We enjoyed almost all of our meals at the hotels, and the food was normally very inexpensive, healthy and rather tasty. At Hotel Sunbird in Bharatpur lunch packets were supplied to us.

CURRENCY:

One Euro were approximately worth 57 Indian Rupies at the time of our journey. We brought US Dollars and exchanged money at the airport in New Delhi.

LITERATURE:

Grimmet R., Inskipp C. and Inskipp T., 1999. Birds of the Indian Subcontinent. Helm, UK.

- Complete with good illustrations and identification information about all birds recorded in India. Indispensable.

Kazmierczak K. & Singh R., 1998. A Birdwatchers' Guide to India. Prion, UK.

- Provides good maps and information about birdwatching for all places that we visited.

DIARY:

6/1. Our initial plans were changed due to very foggy weather in the Delhi area. The original train, which should have departed early in the morning, were delayed until noon, but Mohit arranged for us to take another train that left in the afternoon. This way we could get some birdwatching around Delhi before noon. However, it was almost to foggy to birdwatch at all, but we tried for a few hours in *OKHLA*. Okhla is a river section with an island and some connecting wetland areas, excellent for ducks and other waterbirds. Due to the weather we hardly saw any ducks, even though we managed to spot around 15 **spot-billed ducks**. Other birds included **hoopoe**, **white-throated kingfisher**, **greater coucal**, more than 10 **yellow-footed green pigeons**, **white-breasted waterhen**, 5-10 **purple gallinules**, **river lapwing**, **red-wattled lapwings**, **egyptian vulture**, **longtailed shrike**, **large-billed crows**, a few **black drongos**, **red-breasted flycatcher**, 2 **bluethroats**, **stonechat**, **pied bushchat**, **asian pied starling**, **red-vented bulbul**, **plain prinia**, **common tailorbird**, around 10 **striated babblers**, 2 **large grey babblers**, **citrine wagtails**, around 30 **black-breasted weavers**, a female **red avadavat** and, a bit surprising, a female **crested bunting** in a flock of house sparrows.

In *DELHI*, near the train station we saw many **black kites**, around 10 **painted storks**, **bank mynas** and **common mynas**. The train finally left at four in the afternoon and smoothly reached Sawai Madhopur around 10 p.m. There we were met by a local representative from Asian Adventures and taken to Hotel Vinayak, which is situated a few kilometres south of Ranthambore.

7/1. *RANTHAMBORE* is a large (1334km²) national park consisting mainly of sparse deciduous forest, interspersed with a few small lakes and savannah-like areas. Since the park was established, people have been moved out to make room for the wildlife. There are a few holy places located within the park that are regularly visited by local people, but there are no people actually living inside. Instead, there is a wealth of wild animals, including black-faced langur, nilgai, sambar and spotted deer. At the time of our visit, the park held more than 40 tigers. Outside the park entrance there are some semi-desert areas attractive for birdwatching.

To access the park it is necessary to go with one of the organized safaris leaving at 7 a.m. or at 2.30 p.m. It is possible to go either by jeep or by open-topped bus (canter). At the time of our visit, we paid 400 Rupies (~€7) each for the canter and 3000 (~€0) Rupies for a jeep (in total). Safaris could be booked at our hotel, and there were never any problems for us to get access. However, there were apparently other people trying to book safaris that did not get access, so it might be wise to arrange this in advance, e.g. through Asian Adventures. We started this day with a canter safari in the morning. These busses take around 20 people and mainly concentrate on mammals. Anyway, we managed to see lots of **indian peafowl**, and a few **black-headed ibises**, **rufous treepies**, **white-browed fantail**, **red-breasted flycatcher**, **hume's warbler**, **jungle babblers** and some **tree pipits**.

Before the next safari we did some birding along the road and in the semi-desert to the west of the road between our hotel and the park entrance. We saw, e.g., barred buttonquail, indian roller, green bee-eater, rose-ringed and plum-headed parakeets, spotted dove, 20-25 chestnut-bellied sandgrouse overflying, 3-5 painted sandgrouse, long-billed vulture, red-headed vulture, shikra, isabelline shrike, bay-backed shrike, long-tailed shrike, southern grey shrike, white-browed fantails, indian robin (common), oriental magpie robin, variable wheatear, desert wheatear, isabelline wheatear, brahminy starlings, dusky crag martin, common babbler, indian bushlark, around 20 ashy-crowned sparrow-larks, tawny pipits (common) and indian silverbill.

In the afternoon we went by a jeep safari. This was more suitable for birding than the bus ride, since we were the only passengers and the driver and his assistant had some knowledge about the birds. **Spotted owlet**, **yellow-footed green pigeon**, **white-breasted waterhen**, **river tern**, 2 long-billed vultures, 5-10 darters, indian pond heron, woolly-necked stork, grey-headed canary flycatcher, orphean warbler and hume's warbler were seen. We waited

unsuccessfully at least one hour near a small stream for a tiger seen by another group. However, we later found a **tiger** lying down near one of the lakes. Just as we were going out of the park another **tiger** crossed the road only some 10 meters from our car! Even though we did not understand the Hindi spoken, we understood that both these encounters were spontaneously organized by our driver since the tigers were noticed by other groups before us. We also saw some 10 **mugger crocodiles** during the safari.

8/1. We arranged a driver through the hotel to take us to *SOORWAL LAKE* in the morning. The location of the lake is some ten kilometres west from the national park, and it appears to be very shallow with thousands of ducks inside. The lake is surrounded by semi-desert, so it is probably difficult to go there with a small car. We saw **graylag geese**, some 500 **bar-headed geese**, **ruddy shelducks**, **common shelduck**, **gadwalls**, **wigeons**, lots of **teals**, **pintails**, **shovelers**, **red-crested pochard**, **tufted duck**, **wryneck**, **indian roller**, 5-10 **green bee-eaters**, **red-collared dove**, **black-tailed godwits**, **black-winged stilts**, **pied**

avocets, 2 white-tailed lapwings, river lapwing, yellow-legged gull, 1-2 gull-billed terns, around 2 river terns, 2 indian skimmers, 1 immature bonelli's eagle, around 50 little grebes, 2 little cormorants, black-headed ibis, longtailed shrike, southern grey shrike, large cuckoo-shrike, pied bushchat, around 5 wire-tailed swallows, 2-3 streak-throated swallows, ashy-crowned sparrowlark, 500-1000 bimaculated larks, citrine wagtail and 2 grey-necked buntings.

Around the hotel at noon we saw a **black-shouldered kite**, **long-billed vulture**, **indian magpie robin** and **hume's warbler**.

In the afternoon we took a jeep safari into the park with a guide more or less specialized in birds. This proved fruitful, with a few stops for new bird species. We saw, e.g., some 15 cotton teals, collared scops owl, brown fish owl, yellow-footed green pigeon, redheaded vulture, bay-backed shrike, around 10 small minivets, white-browed fantail, 2 white-bellied drongos, and oriental white-eye. We also saw a tiger resting near the same lake as yesterday. Today it was only 50 metres from the car or, rather, 50 metres from the crowd of jeeps and canters gathered to watch the sleeping animal. The tiger did not seem to bother too much about the commotion. We also saw a few mugger crocodiles and a ruddy mongoose during the safari.

9/1. The hotel arranged a driver for us to Tiger Den Hotel, a few kilometres from the entrance to the national park. We walked through the semi-desert behind the hotel and were picked up again at noon. The only **mallards** during our trip to India were seen above our heads at this site, a flock of 10. We also saw at least two **hoopoes**, around 15 **painted** sandgrouse, around 5 black-shouldered kites, short-toed eagle, 2 bay-backed shrikes, several southern grey shrikes, desert wheatear, several rufous-fronted prinias, common tailorbird, common babbler, indian bushlark, ashy-crowned sparrowlarks, rufous-tailed lark and purple sunbird.

In the afternoon our train left to Bharatpur, which we reached around 4 p.m. In and near the village we saw **pied kingfisher**, **painted stork**, **white-eared bulbul** and 2-3 **hume's warblers**. In the evening we met our guide for the next few days, Mr. Ratan Singh.

10/1. *BHARATPUR*, or Keoladeo Ghana National Park, is indeed a very spectacular birding site. The park consists of 29 km² mixed habitat, mainly marshlands and savannah. This morning we covered the forest areas in the north-eastern parts and the central wetlands. Ratan tried to organize it so that we would see as many birds as possible during our visit in Bharatpur, including a number of target species (e.g., Rock python, brown shrike, orange-headed ground-thrush, black bittern, painted snipe, brown hawk-owl, dusky warbler, indian courser – Ratan informed us about the presence of the latter; otherwise we would not have put it on our list since it is not regular at the site). We walked some parts and Ratan drove us with a rickshaw (three-wheeled bicycle) some parts.

We saw tremendous amounts of birds this day. The following list may serve as a sample: About 10 comb ducks, a similar number of spot-billed ducks, thousands of gadwalls, pintails and shovelers, yellow-crowned woodpecker, at least 5 black-rumped flamebacks, brown-headed barbet, at least 3 greater coucals, an adult dusky eagle owl on a nest with 3 fledglings, brown hawk-owl, 5 sarus cranes, up to 5 pheasant-tailed jacanas, 2 bronze-winged jacanas, shikra, crested honey-buzzard, 2-3 lesser spotted eagles, around 15 greater spotted eagles (at least one of the *fulvescens* phase), 1-2 imperial eagles, little cormorants (common), 3 indian shags, some great cormorants, great egrets, intermediate egrets, 6 black bitterns (!), thousands of painted storks, 2 asian openbills, woolly-necked stork, 3-4 black-necked storks, around 5 ashy-drongos, 2 common woodshrikes, 1 or 2 orange-headed ground-thrushes, wire-tailed swallow, ashy prinia,

blyth's warblers, 3-4 brook's leaf warblers, many hume's warblers, olive-backed pipit. We also saw 5 rock pythons, a jackal and a monitor lizard.

Large-tailed nightjar

11/1. This day was spent mostly in the southern grasslands (beyond the Python point) and at the western marshlands of the national park. We saw e.g., around 50 lesser whistling ducks, comb ducks, spot-billed ducks, 2 ferruginous ducks, coppersmith barbet, at least 3 indian grey hornbills, a male and a female large-tailed nightjar, 5-10 indian coursers, around 2 yellow-wattled lapwings, at least 5 sociable plovers – the latter 3 species were all seen in the south-eastern grasslands – 2 crested serpent-eagles, 2 crested honey-buzzards,

greater spotted eagles, several steppe eagles, several imperial eagles, asian openbill, 3 brown shrikes, around 10 small minivets, around 10 long-tailed minivets, common woodshrike, syke's warbler, long-billed pipit, around 20 streaked weavers, baya weaver, a jackal and a rock python.

12/1. Ratan was an excellent guide, and he was not very expensive. We decided to have him another half day. We had not managed to se painted snipe yet, so Ratan took us to a place by a river north from the village, some 20 minutes by bicycle. The morning was very foggy and we did not see any painted snipe, but a **jack snipe** and some other waders and some wagtails. In a dam about a kilometre west from the park entrance we finally found 2 **painted snipes**, and Ratan was relieved. Near this dam we also saw a **brown hawk-owl** and 2 **grey hornbills**.

We left Bharatpur with a driver at lunch time for Agra. The afternoon was spent at *FATEHPUR SIKRI* and *TAJ MAHAL*. At Taj we saw many **black kites**, **little swifts** and around 5 **white-browed wagtails**. At 21.30 we took an overnight train from Agra Fort north to Lal Kuan.

13/1. We arrived in Lal Kuan at 10 a.m. and were met by Bob – our driver for the rest of the trip – also an employee at Asian Adventures. He drove us to Jungle Lore Lodge in *PANGOT* were we stayed for the next few days. Along the road we saw about 25 **himalayan griffons**, around 10 **steppe eagles** and 4 **blue whistling thrushes**. At the lodge was a very beautiful scenery, and there was a feeding place for birds near the veranda. Here we saw **black-headed jay**, **himalayan bulbul**, **striated prinia**, **streaked laughingthrushes** and **russet sparrows**.

In the afternoon we took a walk along the road to the east through hilly forest surroundings. We saw e.g., **brown-fronted woodpecker**, **rufous-bellied woodpecker**, a female **lesser yellownape**, a male **chestnut-bellied rock thrush**, 2 **blue whistling thrushes**, 2 **white-tailed nuthatches**, **bar-tailed treecreeper**, **spot-winged tit**, several **black-throated tits**, several **black bulbuls**, at least 10 **grey-hooded warblers**, **black-chinned babbler**, 2 **rufous sibias** and 2 **rock sparrows**.

In the evening we heard a **mountain scops owl** from the lodge.

14/1. In the morning we saw two female pink-browed rosefinches outside the lodge. We decided to birdwatch without guide this day, since *SAT TAL* seemed to be a relatively easy area to cover. Bob drove us and waited in the car during our small excursions. He was

familiar with the area – apparently we were not the first birdwatchers in his car. Near the road close to Pangot we had to stop the car to watch a **spotted forktail** in a dry stream by the roadside.

The first stop in the Sat Tal area was at the fenced off fields near Eureka Forbes, around 1km off from the road between Nainital and Bhimtal. In the bushes and undergrowth we found a red-billed blue magpie, a rusty-tailed flycatcher, a male and a female small niltava, a male blue-fronted redstart, grey bushchats, green-backed tit, black-lored tit, a large group of oriental white-eyes (maybe 30 individuals), lemon-rumped warbler, grey-hooded warbler, around 10 rufous-breasted accentors, around 2 black-throated accentors and several yellow-breasted green finches. Soaring above were around 10 himalayan griffons and 5-10 steppe eagles.

Black-throated accentor

Our next stop was the camp site at the west end of the largest lake. Here we found around 10 slaty-headed parakeets, yellow-bellied fantail, white-throated fantail, a male and a female red-flanked bluetails, white-capped water-redstart, 2 spotted forktails, chestnut-headed nuthatch, velvet-fronted nuthatch, lemon-rumped warbler, several golden-spectacled warbler and around 10 white-throated laughingthrushes.

We continued to the tea stalls at the southern side of the lake. Just behind the stalls was a small area of dense bush filled with garbage and leftovers from the tea stalls. Inside the thicket we found a **scaly thrush**, a female **tickel's thrush**, **ultramarine flycatcher**, **golden bush-robin** and a female **blue-fronted redstart**.

Since we had some time left we went back to near the fields of Eureka Forbes, this time following a small valley to the north from the road. In this area we saw a **speckled piculet**, two **rusty-cheeked scimitar babbler** and around 10 **black-chinned babblers**.

On the way back to the lodge, in Bhowali, we saw a plumbeous water-redstart.

15/1. This morning we started off towards Bajún and Mongoli Valley. Lokesh, employed at Asian adventures and the son of Ratan Singh (our guide in Bharatpur), volunteered (=for free! But we tipped him...) as our guide this and the next day. On the road not far from Pangot we saw 2 male **koklass pheasants**, and a **yellow-throated marten** (which, by the way, is a mammal!). Outside Nainital we saw a **blue-capped redstart**. Just before we reached Bajún we saw a **kalij pheasant**.

In *BAJÚN*, walking downhill on a small road a few kilometres north from Mongoli Valley, we saw 2 hill partridges, lesser yellownape, grey treepie, 2-3 chestnut-headed tesias, chestnut-crowned bush warbler, 3-4 white-crested laughingthrushes, around 5 striated laughingthrushes, rusty-cheeked scimitar babblers, around 10 green-tailed sunbirds, a male pink-browed rosefinch and around 10 scarlet finches (5-6 males).

Before we reached Mongoli Valley we saw an **asian barred owlet** in a tree on the roadside. When we came to *MONGOLI VALLEY* the fog started to come, hiding most of the raptors from our eyes. However, before the fog came we saw at least 5 **himalayan griffons**. In spite of the fog we managed to see an adult **lammergeier**. We also saw a **bar-winged flycatcher-shrike**, 5-10 **red-billed leiothrixes** and around 10 **olive-backed pipits**.

We soon re-baptised Lokesh to Eagle-Eye, not so much because he resembled the Swedish pop-star with the same name, but because he was extremely skilled in spotting birds at long distances in tree-tops and thickets. Along the road to our next site he showed us a **great barbet**, a **collared falconet** (feeding on a small bird) and 3-5 **black-crested bulbuls**.

CORBETT FALLS, a small nature reserve with a nice waterfall, was our next stop. We found what we were looking for, namely a long-billed thrush and a slaty-backed **forktail**. We checked in at Tiger camps outside Corbett National Park.

Wallcreeper

Today we birdwatched along KOSI RIVER the whole day, guided by Lokesh and the driver. We drove along the west side as well as the east side, basically between Mohan and Kumeria. Interesting observations included black francolin, kalij pheasant (a male), 3 male and a female red junglefowl, 2 grey-capped pygmy-woodpeckers, 2 fulvous-breasted woodpeckers, scalybellied woodpecker, around 5+1 lineated barbets, 1+1 blue-throated barbets, crested kingfisher, 5-10 himalayan swiftlets, 5-10 crested treeswifts, pallas's fish eagle, crested

serpent eagle, 2 mountain hawk eagles, common green magpie, around 15 long-tailed minivets, bronzed drongo, 2-3 brown dippers (in Kumeria), rufous-bellied niltava (a male; Mohan), white-tailed rubythroat (around 2 males; at Forktail Creek camp site in Mohan), little forktail (Kumeria), variable wheatear, a few wallcreepers (best spotted in Kumeria), 20-30 nepal house martins, chestnut-headed tesia (Mohan), around 15 redbilled leiothrixes and 2 rosy pipits.

We left Tiger Camps for Delhi early in the morning with the driver and Lokesh (who 17/1. was going to visit relatives) as our flight was leaving in the evening. When we came to the office at Asian Adventures we received a message that our flight was delayed by 12 hours due to fog. This gave us the opportunity to go birdwatching again for a few hours. We went to OKHLA. This time the weather was better, so we could observe the ducks and waders as well. There were thousands of ducks, including ruddy shelducks, gadwalls, wigeons, pintails, a few spot-billed ducks, shovelers and tufted ducks. There were also plenty of black-winged stilts, red-wattled lapwings, some wood sandpipers, temminck's stints, at least 50 brownheaded gulls, lots of black-headed gulls, around 15 flamingos, white-browed wagtail and citrine wagtail.

TRIP LIST:
