## INTRODUCTION

In September and October 2007, DOF Travel Danish Ornithological Society (DOF) carried out its second tour to Peru.

The tour was designed to give the participants a good coverage of the northern part of Peru. Here we visited the most typical habitats of the biodiversity of this part of the country. In addition to the main tour we had an extension to the area near Lima

The time of the year was selected to minimise the amount of rain and we actually succeeded with that and only had few days with showers.

The participants were: Allan Bøgedal, Kaj Kampp, Inger Andersen, Niels Riis, Annette Friis, Morten Pedersen, Margit & Leif Olsen, Helene Nielsen, Peter Hansen, Marianne Mølgaard and Erik Mølgaard (Tour Leader).

The tour fee was DKK 32,500 (approx. Euro 4,333.-) and additionally DKK 6.300 (Euro 840) for the extension. The price included all transportation, meals, tips, local guide and tour leader as well as usual DOF services (meetings, information etc).

The trip was arranged by Barry Walker's company "Manu Expeditions". The company had made a perfect arrangement and Frank Lambert was our local leader. Frank did an excellent job and was very pleasant to be together with. Our birdlist reached 558 species.

In South America you always here your guide say "This species will be split and these will be lumped". The Northern Peru is not an exception several species are possible splits. But there goes a lot of time from your guide are told this would be split to the split is approved and you can see the new species in checklists and books, e.g. in 1992 I was told that the *Cinnamomeus* subspecies of Pale-legged Hornero would be split and become Pacific Hornero. In the brand new Peru book the *Cinnamomeus* race is still a subspecies of Pale-legged Hornero.

In the report I follow the checklist made of Barry Walker.

Nearly all the localities visited are well documented in the book "Where to Watch Birds in Peru". Therefore no locality description is made.

The report contains the following:

1. Summary of the journey
2. List of birds
3. List of mammals and reptiles.

Species observed only by one or two participants are marked in the bird and mammals list with the initials of the observers in brackets.

I wish to thank Marianne Mølgaard for her assistance in writing this report.

Finally, it should not be forgotten that the whole trip was characterised by good fellowship and pleasant being together. Again it is a pleasure to look back on a successful DOF tour!
